IT & Management: Phishing Tests & Employee Readiness

Welcome to the sixth installment of the eRisk Cyber Campaign!

This series has been sent monthly to the Member Designated Representative and the key contact for eRisk Hub. If your key contact isn't identified yet, please email their information to crl.memberservices@countyre.org.

Now's the time to inspire your county members to join in. Let's use the tools offered by CRL to empower our risk management strategies. Your active participation drives our collective progress.

How Well Do Your Employees Detect Phishing? Let's Find Out

A simulated phishing email is sent to employees. Half of them click on the malicious link. Through immediate follow-up training, the click rate drastically reduces in subsequent tests, thereby lowering real-world risk.

How confident are you that employees can identify phishing emails? The best way to find out is by conducting simulated phishing tests.

- Launch a Phishing Security Test to measure employee awareness.
- Reinforce training for those who click suspicious links.

Reminder for IT Managers: If phishing simulation is highlighted in your

Cyber Risk Profile, be sure to initiate these tests and monitor improvements over time.

The entire Cyber Resilience series is available today. To learn more and/or complete these actions, log into the eRiskHub to visit the Cyber Resilience page.

Please contact crl.memberservices@countyre.org with general questions regarding the campaign. For technical questions concerning the eRiskHub portal, contact Net Diligence at eriskhub@netdiligence.com.
